

# CS141-15 Functional Programming

**20/21**

**Academic year**

20/21

**Department**

Computer Science

**Level**

Undergraduate Level 1

**Module leader**

Michael Gale

**Credit value**

15

**Module duration**

10 weeks

**Assessment**

100% exam

**Study location**

University of Warwick main campus, Coventry

---

## Description

### Introductory description

The principal aim of this module is to introduce students to the functional programming paradigm.

### Module aims

Students should be able to understand the differences between imperative and functional programming, apply functional programming techniques, and write programs in Haskell.

### Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

- Differences between imperative and functional programming.
- Functional programming basics: expressions and reduction.
- Types, including parametric polymorphism.
- Ad-hoc polymorphism via type classes.
- Recursive and higher-order functions.
- Algebraic data types.

- Strict vs Lazy evaluation.
- Equational reasoning and inductive construction.
- Functors, Applicatives, Foldables, Traversables, and Monads.
- Type-level programming.

## Learning outcomes

By the end of the module, students should be able to:

- Understand the differences between programming paradigms as well as their strengths and weaknesses in order to identify suitable programming languages for a particular task's needs.
- Apply key techniques of the functional programming paradigm to solve programming problems.
- Identify and exploit patterns in programs to design and implement programming abstractions.
- Apply formal reasoning techniques to prove properties about programs and calculate faster programs.
- Use different evaluation strategies to evaluate programs.

## Indicative reading list

Please see Talis Aspire link for most up to date list.

[View reading list on Talis Aspire](#)

## Subject specific skills

Understanding of Functional Programming as a programming paradigm, including intermediate knowledge of programming abstractions and formal reasoning. See syllabus for details.

## Transferable skills

Technical skills.

Critical thinking.

Multitasking.

## Study

### Study time

Type	Required
Lectures	30 sessions of 1 hour (20%)
Practical classes	10 sessions of 1 hour (7%)
Total	150 hours

Type	Required
Private study	110 hours (73%)
Total	150 hours

### Private study description

Background reading of recommended texts.  
Work on unsupervised practical assignments.  
Exam revision.

### Costs

No further costs have been identified for this module.

---

### Assessment

You do not need to pass all assessment components to pass the module.

### Assessment group R

	Weighting	Study time
CS141 resit examination	100%	

### Feedback on assessment

Individual feedback on coursework via Tabula

[Past exam papers for CS141](#)

---

### Availability

#### Post-requisite modules

If you pass this module, you can take:

- CS2D8-15 Functional Programming II
- CS264-15 Functional Programming II

### Courses

This module is Optional for:

- Year 1 of UCSA-G500 Undergraduate Computer Science

- Year 1 of UCSA-G503 Undergraduate Computer Science MEng
- Year 1 of UCSA-I1N1 Undergraduate Computer Science with Business Studies
- Year 1 of UCSA-G406 Undergraduate Computer Systems Engineering
- Year 1 of UCSA-G408 Undergraduate Computer Systems Engineering
- Year 2 of UCSA-G5N1 Undergraduate Computer and Management Sciences

This module is Option list B for:

- Year 1 of UCSA-G4G1 Undergraduate Discrete Mathematics
- Year 1 of UCSA-G4G3 Undergraduate Discrete Mathematics
