Module aims

To develop the notion of competitive equilibrium and the fundamental properties of competitive equilibria.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

The module will typically cover the following topics:1. Foundations and Definitions for the Study of Walrasian Equilibrium: Commodities, Consumer preferences, Edgeworth boxes, Production2. Efficiency of Allocation and Production3. Walrasian Equilibrium in Exchange Economies4. Walrasian Equilibrium in Production Economies5. The First Welfare Theorem of Economics6. The Second Welfare Theorem of Economics

Learning outcomes

By the end of the module, students should be able to:

- By the end of the module the student should be able to acquire a sense of the normative significance of competitive markets in obtaining Pareto optimal allocations via appropriate extensions of the commodity space. The teaching and learning methods that enable students to achieve this learning outcome are: Lectures and Seminars The summative assessment methods that measure the achievement of this learning outcome are: Test and Final Exam.
- By the end of the module the student should be able to learn that a few simple, intuitive principles, formulated precisely, can go a long way in understanding the fundamental aspects of many economic problems.

Feedback on assessment

The Department of Economics is committed to providing high quality and timely feedback to students on their assessed work, to enable them to review and continuously improve their work. We are dedicated to ensuring feedback is returned to students within 20 University working days of their assessment deadline. Feedback for assignments is returned either on a standardised

assessment feedback cover sheet which gives information both by tick boxes and by free comments or via free text comments on tabula, together with the annotated assignment. For tests and problem sets, students receive solutions as an important form of feedback and their marked assignment, with a breakdown of marks and comments by question and sub-question. Students are informed how to access their feedback, either by collecting from the Undergraduate Office or via tabula. Module leaders often provide generic feedback for the cohort outlining what was done well, less well, and what was expected on the assignment and any other common themes. This feedback also includes a cumulative distribution function with summary statistics so students can review their performance in relation to the cohort. This feedback is in addition to the individual-specific feedback on assessment performance.
