Description

Introductory description

To deliver the core teachings of our standard PPMC module, PLUS preparation of students to sit the Association for Project management's APMP examination.

Module aims

To deliver the core teachings of our standard PPMC module, PLUS preparation of students to sit the Association for Project management's APMP examination.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Project context and the business case.

The project management plan and project lifecycles.

The differences between programmes, portfolios, and projects, and their management approaches.

Management of project risks and issues.

Organisational structures in relation to the creation and management of project teams.

Team motivation, conflict resolution, and negotiation.
The procurement processes within projects.
Intra-project change management processes, and configuration management.
Concepts of corporate benefit derived from project delivery.
Project cost management, estimating, and budgetting.
Cost control, Earned Value Management, cost breakdown structures, and cash-flow.
Schedule planning techniques, and resource demand planning.
Project information management.
Communications within projects.

Learning outcomes

By the end of the module, students should be able to:

- Evaluate the requirements for managing and contributing to complex projects effectively.
- Demonstrate a creative and practical approach to inculcating best practice in the application of PM tools and techniques to delivering projects against a predefined scope.
- Interpret the comprehensive skills set required in the formulation and management of project teams, from start to finish, so as to identify and establish roles and responsibilities in the management of the project by the team.
