

MD3B2-30 Dissertation project

20/21

Department

Warwick Medical School

Level

Undergraduate Level 3

Module leader

Hollie White

Credit value

30

Module duration

19 weeks

Assessment

100% coursework

Study location

University of Warwick main campus, Coventry

Description

Introductory description

MD3B2 - Dissertation Project

[Module web page](#)

Module aims

To enable students to develop a deep understanding of a topic area of interest and obtain practical experience of the process and skills required to undertake an extended supervised research project.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

The module offers students the opportunity to work independently, under limited supervision, on an area of health and medical science of their choice. They will learn to take responsibility for the direction and management of a research project through to completion and submission. There is no specific

syllabus for

this module. The topic of the dissertation will depend on the mutual interests of the student and the student's chosen supervisor. During this module the students will gain hands on experience of formulating

appropriate research questions, planning and undertaking a project, analysing data, peer review and

writing their project in form of a paper. The paper will be in a format suitable for publication in a peer

reviewed academic journal and will demonstrate knowledge and appraisal of a wide range of relevant

literature and show that this has been applied to the design, execution and reporting of the project. There

will be online material on key skills relevant to dissertation planning and oral presentation

Learning outcomes

By the end of the module, students should be able to:

- To work independently to plan, manage and complete a cohesive project
- To develop practical and cognitive skills of analysis and synthesis in the context of investigation within the field of health, biomedical and medical sciences
- To evaluate and communicate complex project information using written and oral formats
- To critically appraise own findings and their relevance within the project scope
- To demonstrate responsible research behaviour
- To become immersed in complex disciplinary language, engage with interdisciplinary approaches and identify professional limit

Indicative reading list

Each project will focus on a different research question. Therefore, the bibliography will depend on the

topic and nature of the research project and will be guided by the allocated supervisor. The bibliography

below is to help students to organise and write their project dissertation.

1. Ecker and Skelly (2010) Conducting a winning literature search. Evid Based Spine Care J. 1(1):9-14.
2. Joyner R.L., Rouse W.A. and Glatthorn, A.A. (2013) Writing the winning thesis or dissertation: a step-by-step guide. 4th edition. Corwin Press.
3. Rudestam K.E. (2007) Surviving your dissertation: a comprehensive guide to content and process. 3rd edition. SAGE Publications, Inc.
4. Ballenger B.P. (2007) The curious researcher: a guide to writing research papers. 5th edition. New York: Pearson Longman.
5. University of Warwick Undergraduate Skills Programme Workshops:

Research element

To develop practical and cognitive skills of analysis and synthesis in the context of investigation within the fields of health, biomedical and medical sciences

Subject specific skills

Developed practical and cognitive skills of analysis and synthesis in the context of investigation within the fields of health, biomedical and medical sciences .

To become immersed in complex disciplinary language, engage with interdisciplinary approaches and identify professional limits.

Transferable skills

The transferable skills gained from the completion of this module include, discipline-specific knowledge, ability to gather and interpret information, ability to analyze data, oral communication skills, ability to make decisions and solve problems, written communication skills, ability to learn quickly, ability to manage a project, and creativity/innovative thinking.

Study

Study time

Type	Required
Project supervision	10 sessions of 1 hour (3%)
Private study	290 hours (97%)
Total	300 hours

Private study description

Students would be expected to engage in 290 hours of self-directed learning outside other learning and teaching activities outlined above.

Costs

No further costs have been identified for this module.

Assessment

You do not need to pass all assessment components to pass the module.

Assessment group A

	Weighting	Study time
Dissertation thesis produced to journal article format	70%	
<ul style="list-style-type: none">• Formative assessment: supervisors to manage supervisory time to give feedback on sections/drafts of work (throughout module)• Summative assessment: submission of thesis in the format of a relevant journal article		
Oral presentation and defense of project	30%	
<ul style="list-style-type: none">• Formative assessment: opportunity given for practice of presentation and questions with peers and rubric (end of module)• Summative assessment: presentation undertaken in examination period of term 3 (20 minutes)		

Feedback on assessment

1. Formative assessment: supervisor providing feedback and advice on draft work (throughout module)
 2. Summative assessment: submission of thesis produced to journal article format (start of term 3)
 3. Formative assessment: opportunity for practice of presentation and questions with peers and rubric (end of module)
 4. Summative assessment: Oral presentation and defence of project (20min)
