Description

Introductory description

Sociology of Education is a sub-discipline of Sociology that takes a critical and analytical look at the design, development, experience and outcomes of the education system. Over the course of the module we will take the UK education system as a case study for helping us to understand the ways in which political, social, moral and economic agendas have shaped (and continue to shape) schools and universities. Paying close attention to key policy-making, we will ask critical questions about the role and purpose of education in relation to wider society.
