

ES2F4-15 Structural Analysis

21/22

Department

School of Engineering

Level

Undergraduate Level 2

Module leader

Justin Russell

Credit value

15

Module duration

24 weeks

Assessment

30% coursework, 70% exam

Study location

University of Warwick main campus, Coventry

Description

Introductory description

ES2F4-15 Structural Analysis

[Module web page](#)

Module aims

The aim of the module is to introduce the rationale behind appraisal and design of structures; the main activity of many professional civil engineers. The module will lay the foundations for more advanced and specific structure design modules, since it will review and more deeply explain fundamental structural analysis concepts such as stress and strain, statically determinacy and bending moment/shear forces.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Structures:

- o Stress and Strain: combination and failure criteria
- o Static determinacy.

- o Statically indeterminate 2D frames.
- o Elastic theory of bending and torsion
- o Linear elastic analysis of statically determinate and indeterminate structures
- o Qualitative structural analysis

Learning outcomes

By the end of the module, students should be able to:

- Demonstrate detailed understanding of stress and strain states in structural elements.
- Extend understanding of how structures behave, and can be analysed.
- Perform qualitative and quantitative structural analysis.
- Analyse systems with more than one degrees of freedom.
- Explain the elastic analysis of statically indeterminate structures, and to show key implications of redundancy.

Indicative reading list

Kassimali, A., Structural Analysis, International 5th Ed., Cengage Learning, 2015.
 Megson, T. H. G., Structural and Stress Analysis, Elsevier, 3rd Ed., Oxford, 2014.
 Millais, M., Building Structures: from Concepts to Design, 2nd Ed., Routledge, 2005.

Subject specific skills

Knowledge and understanding of the need for a high level of professional and ethical conduct in engineering.

Knowledge and understanding of risk issues related to structural failure.

Ability to apply relevant practical skills.

Transferable skills

Numeracy: apply mathematical and computational methods to communicate parameters, model and optimize solutions

Plan self-learning and improve performance, as the foundation for lifelong learning/CPD

Communicate (written and oral; to technical and non-technical audiences) and work with others

Study

Study time

| Type | Required |
|-------------------|-----------------------------|
| Lectures | 16 sessions of 1 hour (11%) |
| Practical classes | 3 sessions of 1 hour (2%) |
| Total | 150 hours |

| Type | Required |
|----------------|-----------------|
| Other activity | 17 hours (11%) |
| Private study | 114 hours (76%) |
| Total | 150 hours |

Private study description

114 hours of guided independent learning (including VLE use and support from Employer)

Other activity description

5x1h examples classes

2x1h revision lectures

10x1h of Webinars

Costs

No further costs have been identified for this module.

Assessment

You must pass all assessment components to pass the module.

Assessment group D2

| | Weighting | Study time |
|--|------------------|-------------------|
| Indeterminate Structures Report | 30% | |
| Indeterminate structure calculations and discussion (6 pages length) | | |
| Online Examination | 70% | |
| QMP online examination | | |
| Part A: Multiple Choice Questions. Part B: longer calculation style questions. | | |
| ~Platforms - AEP,QMP | | |

- Online examination: No Answerbook required
- Students may use a calculator
- Engineering Data Book 8th Edition

Feedback on assessment

- Feedback in example classes.

- Model solutions to questions for exam preparation.
- Report: provide individual written comments.
- Written examination: Cohort level feedback.
