

ES3A9-15 Design for Vehicle Safety

21/22

Department

School of Engineering

Level

Undergraduate Level 3

Module leader

Matthew Pitts

Credit value

15

Module duration

10 weeks

Assessment

50% coursework, 50% exam

Study location

University of Warwick main campus, Coventry

Description

Introductory description

ES3A9-15 Design for Vehicle Safety

[Module web page](#)

Module aims

This key automotive-specific module will introduce the concept of design for vehicle safety. The module aims to promote an understanding and an interest in the issues of design for safety for the vehicle structure as well as considering some of the automotive systems which contribute to safety aspects. This module will draw upon the close links that WMG has with the automotive industry to deliver industry-relevant theory and applied engineering.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

What is automotive safety; history, why and how

The role of material science in design for vehicle safety

Material selection for design for safety

Automotive structure and safety
Safety aspects of design for BIW
Crashworthiness legislation
Crash analysis; front/rear impact and side crash
The role of HMI Systems in safety aspects of automotive systems
CAE/FEA in analysis of vehicle structure
Fatigue failure analysis for vehicle structure
The role of different vehicle sub-systems in safety aspects

Learning outcomes

By the end of the module, students should be able to:

- Communicate core scientific and engineering principles that underpin design for vehicle safety, including materials and manufacturing concepts
- Explain developing trends in vehicle safety, including active safety and Human-Machine Interface technologies
- Model key physical principles relating to vehicle safety including kinetics and fatigue
- Summarise the key legislative, social and environmental factors relevant to safety in automotive systems
- Create an analytical model of a simple structure and understand how these principles apply to mathematical modelling and CAE for vehicle safety structures

Subject specific skills

Ability to conceive, make and realise a component, product, system or process
Ability to be pragmatic, taking a systematic approach and the logical and practical steps necessary for, often complex, concepts to become reality
Ability to be risk, cost and value-conscious, and aware of their ethical, social, cultural, environmental, health and safety, and wider professional engineering responsibilities

Transferable skills

Numeracy: apply mathematical and computational methods to communicate parameters, model and optimize solutions

Apply problem solving skills, information retrieval, and the effective use of general IT facilities

Communicate (written and oral; to technical and non-technical audiences) and work with others

Plan self-learning and improve performance, as the foundation for lifelong learning/CPD

Exercise initiative and personal responsibility, including time management, which may be as a team member or leader

Awareness of the nature of business and enterprise in the creation of economic and social value

Overcome difficulties by employing skills, knowledge and understanding in a flexible manner

Appreciation of the global dimensions of engineering, commerce and communication

Be professional in their outlook, be capable of team working, be effective communicators, and be able to exercise responsibility and sound management approaches.

Study

Study time

| Type | Required |
|-------------------|-----------------------------|
| Lectures | 30 sessions of 1 hour (20%) |
| Practical classes | 2 sessions of 3 hours (4%) |
| Other activity | 2 hours (1%) |
| Private study | 112 hours (75%) |
| Total | 150 hours |

Private study description

Guided independent learning

Other activity description

2 x 1 hour examples classes

Costs

No further costs have been identified for this module.

Assessment

You must pass all assessment components to pass the module.

Students can register for this module without taking any assessment.

Assessment group C1

| | Weighting | Study time |
|--|-----------|------------|
| Assessed Assignment Assignment 2500 +/- 250 words | 50% | |
| Online Examination QMP ~Platforms - QMP | 50% | |

- Online examination: No Answerbook required

Feedback on assessment

Written comments and electronically marked-up assignment
Cohort level feedback on examination

Availability

Courses

This module is Core for:

- Year 3 of UESA-H335 BEng Automotive Engineering
- Year 4 of UESA-H334 BEng Automotive Engineering with Intercalated Year
- Year 3 of UESA-H336 MEng Automotive Engineering

This module is Core optional for:

- Year 4 of UESA-H337 MEng Automotive Engineering with Intercalated Year
- Year 3 of UESA-H115 MEng Engineering with Intercalated Year

This module is Optional for:

- Year 3 of UESA-H113 BEng Engineering
- Year 3 of UESA-H114 MEng Engineering
- Year 4 of UESA-H115 MEng Engineering with Intercalated Year

This module is Option list A for:

- Year 4 of UESA-H111 BEng Engineering with Intercalated Year
- UESA-H112 BSc Engineering
 - Year 3 of H112 Engineering
 - Year 3 of H112 Engineering

This module is Option list B for:

- Year 3 of UESA-HN12 BEng Engineering Business Management
- Year 3 of UESA-HN15 BEng Engineering Business Management
- Year 4 of UESA-HN13 BEng Engineering Business Management with Intercalated Year
