## Module aims

To develop an understanding of the range of methods and models available to support the development of effective strategic decisions.
To equip students with the knowledge and skills to identify and apply a selection of methods that are appropriate for supporting the development of effective strategic decisions.
To instil in students an appreciation of how the methods can be incorporated within the planning
process.

## Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

A conceptual model of the strategic development process is introduced which identifies a set of essential elements for example: vision development, strategy creation, strategy rehearsal and evaluation, performance measurement. Frameworks, methods and models to support the development process include but are not limited to:

- Corporate modelling
- System Dynamics for policy design
- Strategy formulation approaches including SWOT / TOWS analysis
- Gaming
- Scenario planning
- Visioning approaches
- Performance measurement

The module will focus on a selection of methods; this selection may vary from year to year. The teaching style emphasises the practical application of techniques for strategy support through the use of case studies and group exercises. Students undertaking the 15 CATs variant are introduced to some additional material in class and through private reading/research. This additional material is also assessed for these students only with an extra question in their assessment.

## Learning outcomes

By the end of the module, students should be able to:

- Understand the range of methods and models available to support the development of effective strategic decision making.
- Appreciate how the methods can be incorporated within the planning process.
- Work out how to analyse information and present it in an intelligible form.
