Description

Introductory description

Dissertations are the result of independent research on a sociological topic of your choice, with some guidance from your supervisor. Instead of writing an essay on a pre-determined topic or doing an exam, you get the opportunity to: choose the topic, work out how to study it, collect and assess relevant information, analyse and criticise the information and write an account of how it was all done in 10,000 words.

Module aims

A dissertation should have a sustained argument. This means that it should draw upon the results of student's reading, thinking, information-gathering and data generation and analysis in such a way that it persuades readers to accept the student's understanding of the topic. The main aim is for students to use a selection of concepts, theoretical ideas, observations, statistical findings and their faculties of criticism and imagination in order to reach defensible conclusions about research questions that they find interesting, challenging or puzzling.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Week 2: Maximizing Your Employability

Week 4: Qualitative Data Analysis / Quantitative Data Analysis

Week 8: CV writing

Week 10: Completing and Submitting

Learning outcomes

By the end of the module, students should be able to:

- Demonstrate intellectual independence and originality by choosing their own subject of study and defining its nature and scope
- Demonstrate an understanding of relevant existing research literature in a relevant area and evaluate this literature critically
- Formulate a testable hypothesis or research question and set it in the context of the existing research literature
- Show an understanding and awareness of the ethical context of a relevant research area
- Recognise the theoretical, practical, and methodological implications and limitations of their research
- Demonstrate an advanced level of knowledge and understanding that will equip them to proceed to study at a higher level.
- Demonstrate capacity to independently locate, access and analyse data
- Demonstrate an ability to independently conduct secondary research
- Demonstrate an ability to independently write about and report findings within the context of wider substantive debates within the discipline

Research element

The dissertation is an independent piece of research carried out by the student with support from a supervisor. This independent research can take various forms, e. g, interviews, focus groups, ethnography, content/discourse analysis, archival or library research.

Subject specific skills

Cognitive skills

1. Able to independently appreciate the applications of a given theory
2. To engage independently with data and related empirical research
3. To be able to independently retrieve, evaluate critically and select relevant information to support coherent arguments
4. Able to independently demonstrate independence of thought and a degree of originality

Professional skills

1. Demonstrate familiarity with ethical and practical considerations in the collection of relevant data
2. Independently undertake an extensive programme of reading and research

3. Engage in sustained analysis, interpretation and comparison of a substantial body of data in an independent manner
4. Independently critically evaluate and comment on sociological research and recognises its implications and draw justifiable conclusions
5. Independently demonstrate the ability to design, plan, and carry out a piece of empirical research within a defined period
6. Independently demonstrate a capacity to work with data and to situate that research within wider disciplinary debates.

Transferable skills

Key skills

1. Present the results of their own independent research in a clearly written, academically and cogently argued, logically structured and properly referenced form
 2. Consolidate communication, information-seeking and intellectual skills
 3. Have the ability to reflect independently on and evaluate their own research project management and performance
 4. To conduct research and present the findings in a coherent argument.
 5. To critically evaluate arguments, assumptions, abstract concepts and data (that may be incomplete), to make judgements, and to frame appropriate questions to achieve a solution - or identify a range of solutions - to a problem.
-
1. To exercise initiative and demonstrate decision-making skills in complex and unpredictable contexts.
