

CS924-15 Agent Based Systems

22/23

Department

Computer Science

Level

Taught Postgraduate Level

Module leader

Paolo Turrini

Credit value

15

Module duration

10 weeks

Assessment

Multiple

Study location

University of Warwick main campus, Coventry

Description

Introductory description

Agent-based systems offer a new paradigm for computer science, based around a strong theoretical foundation and with a large number of practical deployed applications.

[Module web page](#)

Module aims

This module will provide a context for agent-based systems in terms of the recent and developing computing landscape of distributed information and processing resources, and will describe fundamental techniques and systems, illustrating them with real-world applications.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Overview: definitions of agents, distributed AI and agents, intelligent agents, multi-agent systems, cooperation, agent application areas.

Logic-based agents: actions, goals and strategies.

Decision-making agents: expected utility and decisions.

Game-theoretic agents: equilibria and rationality.

Learning-agents: Markov Decision Processes, policy approximation and opponent modelling.

Social-agents: Cooperative decision-making, matching and networks.

Learning outcomes

By the end of the module, students should be able to:

- Students will learn the basic methodologies for the design and the analysis of multi-agent systems, in competitive and cooperative interaction, both from the theoretical and the practical point of view.

Indicative reading list

Please see Talis Aspire link for most up to date list.

[View reading list on Talis Aspire](#)

Subject specific skills

Logical reasoning;
Problem Solving;

Transferable skills

Problem Solving;
Logical reasoning;
Self-directed learning.

Study

Study time

Type	Required
Lectures	30 sessions of 1 hour (20%)
Seminars	9 sessions of 1 hour (6%)
Private study	111 hours (74%)
Total	150 hours

Private study description

Inclusive of private study, coursework, background reading and revision.

Costs

No further costs have been identified for this module.

Assessment

You do not need to pass all assessment components to pass the module.

Students can register for this module without taking any assessment.

Assessment group D

	Weighting	Study time	Eligible for self-certification
Programming and report	25%		No
Programming and report. Approximately 30 pages. This assignment is worth more than 3 CATS and is not, therefore, eligible for self-certification.			
In-person Examination CS924 examination	75%		No

- Answerbook Pink (12 page)
- Students may use a calculator

Assessment group R2

	Weighting	Study time	Eligible for self-certification
On-campus Examination - Resit CS924 resit paper	100%		No

- Answerbook Pink (12 page)
- Students may use a calculator

Feedback on assessment

Written feedback with mark breakdown for programming assignment and report.

[Past exam papers for CS924](#)

Availability

Pre-requisites

Knowledge of Python programming.

Courses

This module is Optional for:

- Year 1 of TCSA-G5PD Postgraduate Taught Computer Science
- Year 1 of TCSA-G5PA Postgraduate Taught Data Analytics
- Year 1 of TMAA-G1PF Postgraduate Taught Mathematics of Systems
