## Description

### Introductory description

This module is designed to give students an overview of the main features of the global economy and to provide an insight into environment in which businesses operate today. The students will explore global economic relationships and the nature of interdependencies between countries. Designed for students with a global outlook and international aspirations, this module offers core preparation for a wide range of degree level courses including International Management, Accounting and Finance.

[Module web page](#)

### Module aims

To prepare students for a wide range of undergraduate courses. The students will be introduced to the concepts and methods used by economists to measure, analyse and evaluate the macroeconomic performance of countries. The students will learn the basics of international trade, international finance and development economics.

### Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

The key areas covered during the course include the following:

Introduction to Economics:

- Nature and purpose of economic activity; problem of scarcity
- Supply and demand model
- PPF model
- Market systems including planned, free market and mixed economies

1. Macroeconomic Performance:

- Macroeconomic objectives and Indicators of macroeconomic performance
- Circular flow and Business cycle models
- Economic growth; GDP
- Models of Economic Growth
- Inflation and unemployment

1. Development economics

- Countries at different stages of development
- Relationship between growth and development
- Indicators of economic development

1. International trade and finance:

- Reasons for trade including the theory of absolute and comparative advantage
- Terms of trade
- Trade barriers; tariffs and quotas
- Pattern of global trade and the role of WTO
- Accounting for trade: International accounts (BOP)
- Alternative exchange rate systems

1. Economics of globalisation:

- Characteristics and consequences of globalisation
- Nature and impact of multinational firms (FDI)
- Examples of economic integration such as EU, USMCA and ASEAN
- Role of international financial institutions (IMF and World Bank)

## **Learning outcomes**

By the end of the module, students should be able to:

- Interpret the principal features of the global economy and environment in which businesses operate.
- Apply the basic principles of economic analysis to the fields of economic growth, international trade and international finance.
- Use diagrams and tables to explain economic ideas.
- Analyse and evaluate global economic case studies.
- Comment on current global economic events and trends.
