## Description

### Introductory description

This module will draw on interdisciplinary theory and research from the field of management, as well as complementary fields of psychology, sociology and economics, to introduce and consider how individuals and groups affect and are affected by organisations and the role of management in such processes. Its practical relevance lies

in developing within students the ability to deal effectively with the challenges that arise in changing work environments, as well as understand how management matters.

At the macro level, specific attention will be given to the study of organisations as social systems; the dynamics of change and survival in organisations; and the relationships between organisations and their environments. At the micro level, topics covered will include enhancing personal and organisational effectiveness, improving decision-making skills, and resolving conflicts in the workplace.

The module will examine both classic readings and more recent treatments of key topics in management. Students will be encouraged to critically engage with the literature and participate in class discussions which will include case analyses and experiential exercises.
