## Description

### Introductory description

This module provides an introduction to issues in the metaphysics and epistemology of mind.

### Module aims

The principal metaphysical question is this: what must the world be like in order to make true the various claims that we make about our own and others' minds? Here we will look at various theories of the metaphysics of mind, including forms of physicalism and functionalism. We will also look at the metaphysics of perceptual experience and the relation perceptual experience provides between mind and world. This links metaphysical and epistemological issues. On the epistemological side, we will look at questions concerning our knowledge of our own and other minds.

### Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Specific topics to be discussed will include the following: Physicalism: type and token identity theories, Functionalism, Internalism and externalism, The nature of perceptual experience, Self-knowledge, Other minds.

## **Learning outcomes**

By the end of the module, students should be able to:

- Understand, analyse and apply key theoretical approaches in contemporary philosophy of mind, and explain the issues at stake in debates between them.
- Identify and assess different argumentative strategies used in the philosophy of mind to address specific questions, and articulate central theoretical concepts that inform different answers to those questions
- Develop and defend their own judgement about competing views in philosophy of mind, and express themselves clearly and with precision
- Recognise the distinctive contributions that various quite different approaches make to philosophical argument in the philosophy of mind, and the challenge of integrating these different contributions
- Arrive at a defensible conception of the nature of philosophy of mind itself
