Description

Introductory description

In this course, we shall employ the tools of normative political philosophy to explore how labour market policymakers should respond to the threats and opportunities associated with technological change, paying particular attention to the diversity of reasons, ideals, and values that justify and constrain the exercise of political power in this domain. We explore the role that work should play in our lives and the proper goals of labour market policies.

Some familiarity with economics is desirable but not essential.

Module aims

In this course, we will learn about a variety of policy disputes relating to social justice and the future of work. Participants will be encouraged to develop and defend their own views about the moral significance of work, as well as what role policy should play in regulating the labour market of the future. The aim is to construct philosophical arguments for and against a variety of policies, and to learn how to respond to arguments of others in a way that is both constructive and critical.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Week 1: Introduction and Summary of the Course.
