

# WM3B4-18 Operational Security Management

**22/23**

**Department**

WMG

**Level**

Undergraduate Level 3

**Module leader**

Christo Panchev

**Credit value**

18

**Module duration**

30 weeks

**Assessment**

Multiple

**Study location**

University of Warwick main campus, Coventry

---

## Description

### Introductory description

This module draws together material, developed in detail in other modules, and presents the various interacting topics in an operational context. The focus is on operational security management relating to the cyber domain: maximising the benefits that flow from cyber engagement, whilst minimising the harms, through deliberate, managed activity. Some of this activity is obvious and directly cyber related: crypto key management or firewall rule change-control for example. Some is less obvious and indirectly cyber related: HR protocols for joiners and leavers for example.

At its core, the module is concerned with systematically addressing threats, vulnerabilities and the negative consequences that obtain should a threat exploit a vulnerability in any organisation's day-to-day cyber engagement. In that sense it uses the vocabulary of risk management. It is however particularly concerned with the home team engaging in concrete patterns (which may be deliberately randomised to hide the pattern) of activity that anticipate and foil an adversary's activity.

### Module aims

Anticipate cyber behaviours, both deliberately adversarial and unintentionally inept, that would

undermine an organisation's viability.

Critically evaluate the vulnerabilities of an organisation through active probing of its systems.  
Manage cyber resources to maintain an organisation's viability in the face of adversarial or unintentional threats.

## **Outline syllabus**

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

The content of this module will be taught from a cyber security perspective.

Secure Operations Management and Service Delivery

Cryptography

Network security

System security

Application security

Physical security

Vulnerability Assessment

Dependable/resilient/survivable systems

## **Learning outcomes**

By the end of the module, students should be able to:

- Anticipate cyber behaviours, both deliberately adversarial and unintentionally inept, that would undermine an organisation's viability
- Critically evaluate the vulnerabilities of an organisation through active probing of its systems
- Manage cyber resources to maintain an organisation's viability in the face of adversarial or unintentional threats

## **Indicative reading list**

Anderson, Ross J., "Security Engineering: A Guide to Building Dependable Distributed Systems", 2 Ed, John Wiley & Sons (2008)

Nathans, David, "Designing and Building a Security Operations Center", Syngress (2014)

Svensson, Robert, "From Hacking to Report Writing: An Introduction to Security and Penetration Testing", Apress (2016)

## **Subject specific skills**

Anticipate cyber behaviours, both deliberately adversarial and unintentionally inept, that would undermine an organisation's viability.

Critically evaluate the vulnerabilities of an organisation through active probing of its systems.

Manage cyber resources to maintain an organisation's viability in the face of adversarial or unintentional threats.

## Transferable skills

critical thinking, problem solving

---

## Study

### Study time

Type	Required
Lectures	18 sessions of 1 hour (10%)
Supervised practical classes	18 sessions of 1 hour 30 minutes (15%)
Online learning (independent)	51 sessions of 1 hour (28%)
Assessment	84 hours (47%)
Total	180 hours

### Private study description

No private study requirements defined for this module.

### Costs

No further costs have been identified for this module.

---

## Assessment

You do not need to pass all assessment components to pass the module.

### Assessment group A2

	Weighting	Study time	Eligible for self-certification
Coursework	40%	40 hours	Yes (extension)
Typically may include a case study scenario of an organisation planning a significant business event (merger, product launch, other), students may be required to propose a business plan to mitigate against all forms of threat that might undermine the success of the event.			
Coursework	60%	44 hours	Yes (extension)
The assessment might require the student to report on best practices for configuring a security information and event management system to detect and report on one or more simulated			

	Weighting	Study time	Eligible for self-certification
attacks.			

## Assessment group R

	Weighting	Study time	Eligible for self-certification
Coursework (Resit)	100%		No

## Feedback on assessment

Verbal feedback during workshop sessions  
Summative feedback on assignment

---

## Availability

## Courses

This module is Core for:

- Year 3 of UWMA-H651 Undergraduate Cyber Security
