Credit value

20

Module duration

10 weeks

Assessment

100% coursework

Study location

University of Warwick main campus, Coventry

Description

Introductory description

Despite some limited success, the world is not on track to meet the 2030 Sustainable Development Goals (SDGs). Yet across the world there is an increased emphasis on citizen participation in doing something about the challenges the goals seek to address. From rapid climate change to food sovereignty and anti-racism, popular movements advocating social change have attempted to rise to these challenges. In addition, reactionary social movements and populist initiatives have played a pivotal role in modern history. Now, a new generation of popular movements and activists are emerging. From XR and Black Lives Matter to their progressive as well as reactionary counterparts across the world, a message is clear: previous efforts have failed. Less clear is what a 'more sustainable' world would look like, or if this is even possible in contemporary times. What lessons if any, are to be learnt from the 'failures' of earlier generations of movements? This module will critically explore the role of popular movements in addressing these complex and intimidating challenges.

Module aims

Popular movements for change are viewed as contesting and contested collectives who reflexively engage with a range of actors and ideas as their strategies and tactics are put into practice. The

module will enable students to develop a comparative and evaluative approach to understanding popular movements through the application of theoretical concepts. Weekly seminars will enable students to engage with a diverse range of historical, contemporary and emergent case studies of popular movements from the global south and global north. This will provide students with a range of skills to develop a critical understanding of popular movements and deepen their knowledge of social change. Studying popular movements will allow students to ultimately reflect on more general questions about the nature of power and resistance in society and the relationship between human agency, social structure and social change and the SDGs. Students will broaden and richly deepen their engagement with popular movements in ways that are intended to feed back into their own commitments to social change, particularly with regard to sustainable development.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Through a series of weekly lectures and seminars the module will begin with an introduction and overview of theories of social change and popular movements. Drawing on case studies, you will be asked to consider key questions such as why and when do popular movements emerge, why do people participate? Theories and examples of key popular movements will be situated in their historical context and critically evaluated. In the following weeks you will critically interrogate non-state actors such as civil society, the third sector, nongovernmental organisations and transnational civil society before moving on to look at the variety of organisational forms, coalitions and transnational organisations. Theories of leadership, movement professionals and organic intellectuals will then be evaluated in relation to conflicting views of social change 'from above' and 'from below'. The later part of the module will draw together the key themes of the contestation of and within movements and how movements frame and understand grievances and persuade others to participate, before critically reflecting on fundamental divisions over strategies and tactics. Finally, you will assess a much under researched area of how to sustain collective and individual participation in popular movements.

Learning outcomes

By the end of the module, students should be able to:

- Distinguish major concepts applied to the understanding of popular movements and explain their relevance and limitations with concrete examples
- Critically analyse the theories of leadership in relation to the strategy, tactics and ideas of popular movements
- An ability to formulate and articulate strategies and ideas for social change, orally, in seminars and in written form in assessed work
- Develop interpersonal skills and the ability to engage in cooperative group learning through seminar discussions

Research element

Healey & Jenkins (2009) propose that Research-led-teaching design should consider four discrete opportunities. This module has been designed to include all four of these opportunities.

1. Research-led learning, where the module syllabus is developed from current research in relevant fields, being based on contemporary and seminal, peer reviewed and other high quality research literature. As such, all knowledge for student engagement will be consciously and specifically chosen for its merits in reference to broader academic understanding. This will include the most contemporary literature regarding global COVID-19 pandemic, as well as leading work from other contexts.
2. Research-tutored learning, where students engage actively in discussing high quality, contemporary and seminal research literature. Contact time will use seminal and contemporary research papers for a basis of discussion and other learning activities.
3. Research-Orientated, where student develop research and inquiry skills. In line with the recommendations of scholarship, research skills - for Critical Discourse analysis research and analysis - are embedded into the subject content teaching of the module.

Interdisciplinary

Positive global transformations are widely recognised to require transdisciplinary approaches and this approach is adopted in the design and delivery of learning opportunities. Leadership is broadly conceived and the module draws on knowledge from Philosophy, Development Studies, Sociology, Political-Ecology etc. Authentic assessment will require students to demonstrate transdisciplinary aptitude, through the production of a Personal Methodology of change that draws on a range of disciplinary knowledge sets. Transdisciplinary aptitude will be explicitly embedded in the marking rubric, as adapted from the standard university scale and descriptors.

International

This is a module on the Master's in Global Sustainable Development which offers learning experiences that draw on a range of different national and international and subjects. Literature will be chosen according to the principles of decolonising the curriculum, with space consciously created for the expression of usually more marginal discourses. For example, the module will include literature authored by stakeholders in the Global South, as well as covering these geographies and local narratives about them, as a point of subject.

Subject specific skills

The students will develop a transdisciplinary aptitude for reflecting on the nature of appropriate, positive intellectual leadership for transformation in social movements, including an ability to engage effectively with varied vocabularies and the knowledge sets they represent, as well as how to combine these authentically and innovatively.

Students will also have the opportunity to develop skills for personal research, note taking, synthesis of information, the communication and discussion of information, necessary for change

agency.

Transferable skills

Enhancing and deepening written and oral communication skills. The development of which will be linked to understanding and critically interrogating complex ideas and to apply these to practical situations. This will be aided through extending research and analytical skills, including the ability to interpret and challenge numerical data and and complex argument and the ability to use evidence and logic to construct strong arguments.

All of which will require the ability to plan, organise and undertake sophisticated research.

Study

Study time

Type	Required
Lectures	10 sessions of 1 hour (8%)
Seminars	10 sessions of 1 hour 30 minutes (12%)
Private study	95 hours (79%)
Total	120 hours

Private study description

Students are expected to prepare for classes and seminars. They will also be expected to work cooperatively to prepare seminar presentations on key themes from the course such as the ideas, strategies and tactics of specific campaigns and events linked to social movements, and gender and leadership in social movements.

Costs

No further costs have been identified for this module.

Assessment

You must pass all assessment components to pass the module.

Assessment group A1

	Weighting	Study time
Critical review	60%	40 hours
A critical evaluation of the strategy and tactics of a social movement in relation to one of the		

	Weighting	Study time
Sustainable Development Goals (SDGs).		
Presentation of key findings	15%	15 hours
Explain and justify the theoretical approach applied to the analysis undertaken in your critical review. Identify and problematise the key critiques levelled by those who disagree with the approach.		
Reflective portfolio	25%	25 hours
Compile a written portfolio of three 500-word entries that reflect on key popular movement ideas, concepts, or examples to demonstrate learning from the module.		

Feedback on assessment

The presentation and essay will both receive written feedback on Tabula in line with departmental policy.

The portfolio will receive formative feedback in verbal/oral format if submitted, and the summative will receive written feedback on Tabula in line with departmental policy.
