Description

Introductory description

Topology is the study of properties of spaces invariant under continuous deformation. For this reason it is often called "rubber-sheet geometry". The module covers: topological spaces and basic examples; compactness; connectedness and path-connectedness; identification topology; Cartesian products; homotopy and the fundamental group; winding numbers and applications; an outline of the classification of surfaces.

Learning outcomes

By the end of the module, students should be able to:

- To explain how to distinguish spaces by means of simple topological invariants (compactness, connectedness and the fundamental group)
- To explain how to construct spaces by gluing and to prove that in certain cases that the result is homeomorphic to a standard space
- To construct simple examples of spaces with given properties (eg compact but not connected or connected but not path connected).
