## Description

### Introductory description

EN2D0-30 Literature, Environment, Ecology

The premise of the module is twofold. First, given the scale and urgency of environmental breakdown in the twenty-first century, ecology – as a way of seeing and reading the world – should change how we study literature. Second, a materialist world ecology offers the most useful way of re-orienting literary study today, since it is (by definition) comparative and global in scope, while remaining attentive to the material and relational particulars of local environments, including textual ones.

### Module aims

Because ecocriticism and the environmental humanities are among our fastest developing disciplines, the module aims to provide both a partial introduction to their history and an updated report from the field. Our emphasis will be on theoretical contexts for reading in environmental terms, with a special interest in innovative forms of imaginative, critical and activist practice. Topics to be covered include nature/society dualisms, the natural history of capitalism,

postcolonial critiques of 'wilderness,' environmental questions of race and sexuality, waste, cli-fi and dystopia, the Anthropocene/Capitalocene debates, ecological crisis and environmental activism. Throughout, we will examine literary and cultural production in relation to questions of environmental impact, models of ecological thinking and the implications of revising conventional ways of articulating human with extra-human nature. Our approach will be a combination of close and creative reading with attention to cultural and historical context, cross-national comparative study and variations in genre, methodology and medium.
