### Description

### Introductory description

ES193-15 Engineering Mathematics

Module web page

### Module aims

To present, in context, and provide skills in the application of fundamental Mathematics concepts that underpin all of Engineering. To encourage the development of problem solving as required in other Year 1 modules and in order that more advanced material can be tackled in modules taught in later years.

### **Outline syllabus**

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Mathematics:

Functions, Algebra and Algebraic Manipulation, Co-ordinate Geometry, Differentiation, Vector Algebra, Matrices and Determinants, Matrix Algebra and Linear equations, Complex Numbers, Partial Differentiation. Integration, Applications of Integration, Solution of 1st and 2nd Order

Ordinary Differential Equations, Laplace Transforms, Probability Theory, Discrete and Continuous Probability Distributions.

### Learning outcomes

By the end of the module, students should be able to:

- Recognise and be able to apply mathematical tools and techniques to solve engineering based problems. [C1(D), M1(D), C3(D), M3(D)]
- Recognise and be able to apply probabilistic and statistical tools and techniques to solve engineering based problems. [C1(D), M1(D), C3(D), M3(D)]
- Make appropriate assumptions to simplify and thus model real-life Engineering problems. [C1(D), M1(D), C3(D), M3(D)]
- Analyse models using basic mathematical techniques including statistical and numerical techniques. [C1(D), M1(D), C3(D), M3(D)]

### Indicative reading list

"Mathematics for Engineers: A Modern Interactive Approach (Fourth Edition)" by Anthony Croft and Robert Davison, Pearson/Prentice Hall, 20015, ISBN 978-1-292-06593-9

### Subject specific skills

Ability to integrate analytical, mathematical and programming skills for analysing, developing and critically evaluating mathematical engineering models. Ability to be pragmatic, taking a systematic approach and the logical and practical steps necessary for complex concepts to become a reality.

### Transferable skills

Ability to overcome difficulties by employing skills, knowledge and understanding in a flexible manner. Ability to apply mathematical and computational methods to communicate parameters, model and optimise solutions. Ability to apply problem-solving skills, information retrieval, and the effective use of specific software packages and general IT facilities. Ability to plan self-learning and improve performance as the foundation for lifelong learning and continuous professional development.
