Module duration

10 weeks

Assessment

100% coursework

Study location

University of Warwick main campus, Coventry

Description

Introductory description

Forms of Identity investigates a wide range of identities (e.g. personal, national, gender, ethnic, racial, spiritual, linguistic, genetic, organisational) through interactive seminars, readings, and practical exercises which will support students in reflecting on major issues associated with these themes in an interdisciplinary manner. It will encourage students to consider the increasing prominence of consumer, hybrid, border, and marginal identities, and the notion that identity can shift, that it can be fragmented, and that a variety of identities can exist simultaneously. Each week, a different subject specialist from, for example, sociology, politics, biology, philosophy, psychology or the arts, will introduce their discipline's understanding of identity, which will be followed by a consolidation session, geared to facilitate active, interdisciplinary engagement with the topics. This module will be in a blended format.

[Module web page](#)

Module aims

This module aims to:

1. Help students to analyse critical ideas concerning identity from a range of disciplines (multidisciplinary), and synthesise these into thoughtful intellectual responses (interdisciplinary), that lead students to insights that may lie beyond the scope of a single

discipline (transdisciplinary).

2. Provide opportunities for students to engage with the limitations of traditionally distinct but well-established disciplines, and encourage them to consider alternate ways of approaching problems that span beyond a single discipline.
3. Require students to take responsibility for their own academic and research activity, while also stimulating teamwork and collaboration, thus creating a pool of transferable skills that students can acquire and practice.
4. Facilitate an exploration of the relationship between the mind and body in the formation of identity, and the importance of consumer, hybrid, border, and marginal identities.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Week 1: Introduction to 'Forms of Identity'

This week will introduce students to the module: content, teaching and assessment. Students will draw on their existing knowledge and disciplinary approaches to begin reflecting on their learning journey through the theme of 'identity'.

Week 2: Social Constructions of Identity

This week will explore 'Identity' through a sociological lens. It will examine theories on socialisation and group identities, by looking specifically at gender and identity.

Week 3: Migration and National Identity

This week will explore identity through a geopolitical lens. The focus here will be on national identification and migration.

Week 4: Identity: Race, Ethnicity and Religion

This week will explore race, ethnicity and spiritual identity through a case study focusing on transnational education.

Week 5: Personal Identity

This week will explore personal identity as it touches on narrative and mental health, as seen through the disciplines of Psychology and Philosophy.

Week 6: Biological Identity

This week will examine 'Identity' from a scientific perspective, looking at the interplay between genetics and identity.

Week 7: Language, Discourse & Identity

This week will examine the role of language and discursive practices as linked to identity. It will explore identity from a sociolinguistics perspective.

Week 8: Identity and Media

This week will explore the role of the media in the reproduction of identities.

Week 9: Organisational, Brand and Reputation

This week will explore identity in the context of organisations (e.g. brand identities and/or communities).

Week 10: SDA Showcase & Peer Review

This week will be an opportunity for students to present their preliminary SDA work and to receive formative feedback from their peers. Students will be given the opportunity to reflect on their learning journey over the course of the module, as a concluding activity.

Learning outcomes

By the end of the module, students should be able to:

- 1. Explore different disciplinary approaches in the investigation of how identities are formed, changed or imposed.
- 2. Respond to problems through the development of a coherent thesis on the theme of identity, that is interdisciplinary in nature.
- 3. Reflect analytically on sources and arguments in order to develop their own informed ideas.
- 4. Reflect on their subject knowledge, interdisciplinary learning and independent research, including how it can be made accessible to wider audiences (where relevant).
- 5. Reference and communicate ideas in a way that demonstrates familiarity with and grasp of professional and scholarly practice.
- 6. Design and manage their own interdisciplinary academic and research activity.

Research element

All students will undertake an individual, supervised research project in the form of a Student-Devised Assessment (SDA). Students will work closely with their tutor to develop an interdisciplinary project in an agreed format which best articulates their ideas, and will satisfy the learning outcomes for this module. Students who do not choose a traditional academic writing structure for this project (e.g. essay, report) will be required to supplement their piece with an accompanying document which will satisfy the learning outcomes for this module.

Interdisciplinary

This module introduces the theme of 'identity' through different disciplinary lenses. Each week, students will be exposed to new disciplinary approaches towards the topic by a specialist contributor (first, in the format of a pre-recorded lecture to be accessed asynchronously online, and then a face-to-face workshop to engage with these themes actively). They will then be given the opportunity to consolidate their knowledge and weekly readings in an interdisciplinary format. Each specialist contributor will be asked to provide a case study example of how each discipline approaches and contextualises the theories/concepts introduced, so that students are made aware of problem-based learning and the benefits/limitations of tackling them via a single disciplinary approach. Interdisciplinary learning calls for collaboration, and therefore students will be assigned into multidisciplinary working groups to complete weekly tasks together outside of class. Both assessment formats on this module will encourage students to examine a source or an issue in an interdisciplinary manner, and are designed to facilitate reflective thinking as a

significant component of interdisciplinary work.

International

Each week students will be required to reflect on the international, intercultural and/or transnational potential of the overarching theme, 'identity' in the 1.5-hour consolidation session. Specialist contributors will also be asked to add an international element to their sessions. For example, the unit on migration will discuss 'hybrid' identities that are a result of international, and/or transnational mobility.

Subject specific skills

Students on the module will develop an understanding of the limits of notions such as the nature of individual identity broadly, national identity, bodily identity, gender identity, ethnic identity, personal identity, organisational identity, and spiritual identity. They will make decisions concerning the importance of consumer, hybrid, border, and marginal identities, and the notion that identity can shift, that it can be fragmented, and that a variety of identities can exist simultaneously. They will explore the relationship between the mind and the body in the formation of identity.

Transferable skills

Students will develop an awareness of the limits of traditionally distinct but well-established disciplines. They will develop problem-based learning skills, including interdisciplinary/transdisciplinary approaches, and the significance of critical reflection in these processes. They will develop communication skills, as they design and manage their own academic and research activity, while also stimulating team-work, collaboration, and ultimately the provision of peer review and evaluation.

Study

Study time

Type	Required
Seminars	10 sessions of 2 hours (13%)
Project supervision	2 sessions of 15 minutes (0%)
Other activity	4 hours (3%)
Private study	25 hours 30 minutes (17%)
Assessment	100 hours (67%)
Total	150 hours

Private study description

Private study hours include viewing weekly pre-recorded mini presentations accessible on Moodle and delivered by specialist contributors; completing reading for timetabled teaching sessions and

follow-up reading work.

Other activity description

Students will be assigned into small, multidisciplinary groups of 5. Each week, groups will meet up outside of class to complete a short activity designed by that week's specialist contributor and the module convenor. These activities relate to the specialist contributor's pre-recorded 'mini lecture' which will have been made available to students on Moodle and any relevant assigned readings. These multidisciplinary groups give students the opportunity to go over the material together prior to class; collaborate and engage in interdisciplinary discussions with peers from different disciplines; and gain confidence in what are likely going to be very new themes prior to the group face-to-face session each week. Students will have the choice to meet face-to-face or online with their peers, and have autonomy to schedule their meetings as they see fit for their respective groups.

Costs

No further costs have been identified for this module.

Assessment

You do not need to pass all assessment components to pass the module.

Assessment group A3

	Weighting	Study time
Interdisciplinary Critical Response	40%	40 hours
Students will write an interdisciplinary critical response to a source of their choice, as it relates to the theme of 'identity'. The source of inspiration can be an object, an image, a video, a performance, a piece of artwork, a reading, etc. The response must incorporate relevant theories and readings they have encountered so far on the module, and must demonstrate interdisciplinary critical thinking. As it is a critical response, there is a reflective element to this piece of writing.		
Student Devised Assessment	60%	60 hours
This is an interdisciplinary research project, demonstrated through a negotiated format. This will be the final piece of assessed work submitted by the student. (2,500 words or equivalent).		

Feedback on assessment

Formative oral feedback will be given to students at relevant points within seminars throughout the module, and at the concluding presentations. Students will also receive formative feedback in the form of a peer-review session in Week 10, as students present their preliminary SDA work to their peers. Each submitted Assessment piece will receive detailed written feedback/feedforward by

their marker, including annotated remarks.

Students and Tutor will work together consistently using the marking criteria throughout the module, which will inform assessment literacy and will ensure transparency in assessment expectations and feedback.

Availability

There is currently no information about the courses for which this module is core or optional.
