Description

Introductory description

We constantly face the need to make decisions, may they be relatively trivial ('Do I go for the pepperoni pizza or the ham and pineapple one?') or momentous ones ('Do I get married to him?'). Philosophers have looked at human decision making from a variety of different perspectives: What are the processes involved in the way people actually make decisions? How should we go about making decisions? What sorts of challenges do we face in making decisions, and how might we be able to overcome them? Should we regret bad decisions we made in the past, or just move on? This module aims to introduce students to some of the answers philosophers have given to these questions, and to evaluate them critically.

Module aims

By taking the topic of decisions as its focus, the module aims to foster students' understanding of issues such as the following: What is it to act rationally? Do people ultimately always act for selfish reasons? What makes something a hard choice? Why do we procrastinate and how can we overcome procrastination? What role do emotions play in decision-making? You will learn to analyse and critically evaluate the answers philosophers have given to such questions, and to situate them in wider philosophical debates. The module also aims to develop students' skills at reading and analysing philosophical literature and formulating philosophical arguments with clarity and precision.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

1. Rational choice theory (weeks 1-3)
 - The nature of rational choice explanation
 - Bounded rationality
 - Philosophical critiques of rational choice theory
2. Hard choices (weeks 4-7)
 - Incomparability and incommensurability
 - Transformative choice
 - Procrastination
3. Inter-temporal choice and the role of emotions (weeks 8-10)
 - Dynamic choice and its paradoxes
 - Temporal discounting and temporal bias
 - Regret and choice

Learning outcomes

By the end of the module, students should be able to:

- At the end of the module, you should have a good understanding of a number of ways in which decision making has been and continues to be the subject of philosophical debate, and how these debates relate to other areas of philosophy as well as to empirical research on decision making. You should be able to use some of the key concepts philosophers have used to analyse human decision making, and be able to critically evaluate both descriptive and normative accounts of human decision making in philosophy.

Interdisciplinary

Apart from the philosophical literature about decision making, the volume also draws on, and interrogates, literature from other relevant disciplines, such as psychology and economics.

Subject specific skills

Students should be able to express themselves using precise philosophical vocabulary, appreciate what makes some questions about decision making distinctly philosophical ones, and engage independently in philosophical debate.

Transferable skills

- (i) The capacity to read complex material effectively and critically.
- (ii) The capacity to explain ideas and arguments clearly, briefly and accurately.
- (iii) The capacity to think about problems by deploying the capacity for clear thinking and reasoning
- (iv) The capacity to communicate effectively in a group environment.
