

# ES3G7-15 Water Engineering

**26/27**

**Department**

School of Engineering

**Level**

Undergraduate Level 2

**Module leader**

Modupe Jimoh

**Credit value**

15

**Module duration**

24 weeks

**Assessment**

100% exam

**Study location**

University of Warwick main campus, Coventry

---

## Description

### Introductory description

ES3G7-15 - Water Engineering

[Module web page](#)

### Module aims

Knowledge of water engineering is essential for good practice of civil and environmental engineering. This module provides background material on open channel and engineering hydraulics and engineering hydrology that serve as a sound base for other relevant civil and environmental modules and for future professional practice.

The module will enable students to understand the principles of free surface and hydraulic flows and engineering hydrology applied to civil engineering problems.

### Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Open Channel Hydraulics

- Review of hydrostatics, pipe flow and Bernoulli equation
- Laminar and turbulent flow in open channels
- Laminar flow analysis
- Principles of uniform flow
- Development of friction equations - magnitude of friction coefficients
- Channels with distorted cross-sections & “Best form” cross-sections
- Development of energy concepts & specific energy
- Critical flow considerations
- Applications of the energy principle
- Measurement structures and dilution gauging
- Development of conservation of momentum principle
- Specific force considerations
- Analysis of hydraulic jump
- Gradually varied flow equation & classification of gradually varied flow profiles
- Methods for the calculation of gradually varied flow profiles
- Location of hydraulic jump
- Introduction to commercial numerical software

### Engineering Hydrology

- The hydrological cycle
- Precipitation, initial losses, infiltration, percolation, evapotranspiration, surface runoff, groundwater flow
- Rainfall types and spatial variability of rainfall (UK)
- Rainfall. Intensity - duration - frequency (return period) analysis
- The Flood Estimation Handbook (FEH)
- Design storm rainfall. Uniform intensity and FEH rainfall profiles
- River flow analysis
- The unit hydrograph
- FEH techniques to estimate runoff from catchment characteristics; impacts of urbanisation
- Reservoir routing

## Learning outcomes

By the end of the module, students should be able to:

- Critique the central role of water in our society.
- Demonstrate critical knowledge and understanding of disciplinary theories, positions and research themes related to the field of water.
- Explain in detail the principles controlling open channel flows.
- Critically summarise the differences between flow types.
- Analyse flow problems using friction, energy and momentum considerations.
- Predict and interpret rainfall and runoff characteristics for UK catchments.

## Indicative reading list

[Reading lists can be found in Talis](#)

## Subject specific skills

No subject specific skills defined for this module.

## Transferable skills

No transferable skills defined for this module.

---

## Study

### Study time

Type	Required
Lectures	20 sessions of 1 hour (13%)
Tutorials	6 sessions of 1 hour (4%)
Practical classes	3 sessions of 1 hour (2%)
Other activity	10 hours (7%)
Private study	111 hours (74%)
Total	150 hours

### Private study description

111 hours of guided independent learning (including VLE use and support from Employer)

### Other activity description

10 hours of webinars

### Costs

No further costs have been identified for this module.

---

## Assessment

You do not need to pass all assessment components to pass the module.

### Assessment group B1

Assessment component	Weighting	Study time	Eligible for self-certification
Centrally-timetabled examination (On-campus) Written Examination	100%		No

- 
- Answerbook Gold (24 page)
  - Students may use a calculator
  - Engineering Data Book 8th Edition

Reassessment component is the same

## Feedback on assessment

Advice and feedback are available on the lecture material and examination questions, via online web-forum based in module support Moodle pages.

Cohort level feedback on examination.

## Availability

### Pre-requisites

1 (Core)

### Courses

This module is Core for:

- DESA-H221 Undergraduate Civil and Infrastructure Engineering (Non-integrated Degree Apprenticeship)
  - Year 4 of H221 Civil and Infrastructure Engineering (Degree Apprenticeship)
  - Year 4 of H221 Civil and Infrastructure Engineering (Degree Apprenticeship)
