## Description

### Introductory description

The module introduces students to the finance field by developing the essential knowledge to solve general finance problems. This is a skills-based module that will help students to think critically and build an intuitive understanding of how financial decision-making works in practice. To achieve these objectives, the module includes case studies and applications of the skills one needs to master to examine common problems faced by financial managers. By teaching the basic concepts in finance, the module will develop the necessary knowledge and appreciation to enable students to enter into intelligent discussion with finance professionals.

### Module aims

The principal objectives of this module are:

To provide students with a good grounding in basic concepts of finance

To establish a “finance mindset” that views finance as applied microeconomics in a business context, with value creation as a central concept

To develop students' skills in financial planning and decision-making, including providing the math and statistical tools required to solve financial problems

To instill an appreciation for decision-making in a complex world with uncertainty and understand

the implications of sustainability for financial analysis

## Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Time value of money

Bond valuation

Stock valuation and equity multiples

Financial securities used by corporations

Risk and return tradeoff

Diversification

Capital Asset Pricing Model (CAPM)

Market efficiency
