Description

Introductory description

This module introduces the key management areas of management accounting and corporate reporting. The use of financial information, whether used internally, or reported externally is crucial for any manager wishing to move up through their company to grasp.

The intention of this module is not to try to turn students into accountants, but to try to enable them to understand and interpret financial and other corporate information, enter into intelligent discussion with financial partners and to be able to appreciate the bigger picture rather than get lost in the detail. It is inevitable that there will be some calculations but there is also a heavy emphasis on understanding the issues around the numbers and the context in which they are set. The assessments will strike a balance between calculation, interpretation and discussion.

Module aims

The objectives for this module are to:

(1) Develop students' understanding of the key financial statements: profit and loss account, balance sheet and cash flow statement.

- (2) Develop students' ability to interpret the key financial statements in order to assist in decision making
- (3) Develop students' understanding of the contents of corporate annual reports and other corporate published information
- (4) Develop students' understanding of the importance of cash flow management
- (5) Provide students with the skills to use costing information to make short- and long-term decisions
- (6) Develop students' understanding of the key issues of current 'hot topics' (that is, significant areas of current debate) in accounting and finance.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Understanding Financial statements
Measuring and Reporting Performance and Position
Analyzing and interpreting financial statements
Relationship between Cash Flow and Earnings
