

MA267-10 Groups and Rings

26/27

Department

Warwick Mathematics Institute

Level

Undergraduate Level 2

Module leader

Nicholas Jackson

Credit value

10

Module duration

10 weeks

Assessment

Multiple

Study location

University of Warwick main campus, Coventry

Description

Introductory description

This is an introductory abstract algebra module. As the title suggests, the two main objects of study are groups and rings.

Module aims

This is a standard first abstract algebra module, roughly based on the current version of Algebra-2: Groups and Rings. It consists of 5 weeks of Group Theory and 5 weeks of Ring Theory. Some of the heavier ring-theoretic topics in the current Algebra-2 are dropped. The module gives access to all Algebra options in year 2 and 3 as well as Number Theory in year 2.

The students have done some algebra in Sets and Numbers in year 1. The proficiency with operations in the symmetric group is assumed. For instance, the students may have seen the following notions: groups (abelian, cyclic), order of an element, ring, field. On the other hand, no proficiency in these notions is assumed.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

- Group Theory: motivating examples (numbers, dihedral group, quaternionic group, matrix groups), elementary properties, subgroup, coset, Lagrange's theorem, quotient group, isomorphism theorem, free group, group given by generators and relations, group action, G-set G/H , orbit, stabiliser, the orbit-stabiliser theorem, conjugacy class, classes in S_n , classification of groups up to order 8.
- Ring Theory (a subset of the topics below will be covered) :commutative and non-commutative ring, domain, examples ($\mathbb{Z}[x]$, $\mathbb{Z}/n\mathbb{Z}$, $F[x]$, $F[x]/(f)$), ideal, quotient ring, isomorphism theorem, Chinese remainder theorem for $\mathbb{Z}/n\mathbb{Z}$ and $F[x]/(f)$, unit group, prime and irreducible element, factorization, Euclidean domain, characteristic of a field, unique factorization domain, ED is UFD, Eisenstein criterion, Gauss lemma, cyclotomic polynomial, finite subgroups of units in fields.
- Introduction to Module Theory
- List of covered algebraic definitions: group or ring homomorphism (including kernel, image, isomorphism), direct product, coset, normal subgroup, quotient group, ideal, quotient ring, domain, irreducible element, prime element, euclidean domain, unique factorisation domain, direct product, free group, generators and relations, module, free module, direct sum, unimodular Smith normal form, action, orbit, stabiliser.

Learning outcomes

By the end of the module, students should be able to:

- have a working knowledge of the main constructions and concepts of theories of groups and rings
- recognise, classify and construct examples of groups and rings with specified properties by applying the algebraic concepts
- get the working knowledge of the understand the definition of various types of ring, and be familiar with a number of examples, including numbers, polynomials and $\mathbb{Z}/n\mathbb{Z}$

Indicative reading list

[Reading lists can be found in Talis](#)

[Specific reading list for the module](#)

Subject specific skills

Students will improve their skills in thinking algebraically in a variety of settings. This includes working with axiomatic definitions of algebraic objects and analysing the structure and relationships between algebraic objects using fundamental tools such as subobjects and homomorphisms, laying a foundation for future study in algebra, number theory and algebraic geometry.

Transferable skills

The module emphasises the power of generalisation and abstraction. Students will improve their

ability to analyse abstract concepts and to solve problems by selecting and applying appropriate abstract tools.

Study

Study time

Type	Required
Lectures	30 sessions of 1 hour (30%)
Seminars	9 sessions of 1 hour (9%)
Private study	61 hours (61%)
Total	100 hours

Private study description

Working on assignments, going over lecture notes, text books, exam revision.

Costs

No further costs have been identified for this module.

Assessment

You do not need to pass all assessment components to pass the module.

Assessment group D1

	Weighting	Study time	Eligible for self-certification
Assignments	15%		No
Centrally-timetabled examination (On-campus)	85%		No

- Answerbook Pink (12 page)

Assessment group R1

	Weighting	Study time	Eligible for self-certification
In-person Examination - Resit	100%		No

- Answerbook Pink (12 page)

Feedback on assessment

Marked homework (both assessed and formative) is returned and discussed in smaller classes. Exam feedback is given.

Courses

This module is Core for:

- Year 2 of UMAA-GV17 Undergraduate Mathematics and Philosophy
- Year 2 of UMAA-GV19 Undergraduate Mathematics and Philosophy with Specialism in Logic and Foundations

This module is Optional for:

- Year 3 of USTA-G300 Undergraduate Master of Mathematics, Operational Research, Statistics and Economics

This module is Option list A for:

- Year 2 of UCSA-G4G1 Undergraduate Discrete Mathematics
- UCSA-G4G3 Undergraduate Discrete Mathematics
 - Year 2 of G4G1 Discrete Mathematics
 - Year 2 of G4G3 Discrete Mathematics
- Year 2 of UPXA-GF13 Undergraduate Mathematics and Physics (BSc)
- UPXA-FG31 Undergraduate Mathematics and Physics (MMathPhys)
 - Year 2 of GF13 Mathematics and Physics
 - Year 2 of FG31 Mathematics and Physics (MMathPhys)
- Year 2 of USTA-G1G3 Undergraduate Mathematics and Statistics (BSc MMathStat)
- Year 2 of USTA-GG14 Undergraduate Mathematics and Statistics (BSc)

This module is Option list B for:

- Year 2 of UPXA-GF13 Undergraduate Mathematics and Physics (BSc)
- Year 2 of UPXA-FG31 Undergraduate Mathematics and Physics (MMathPhys)
- Year 3 of USTA-GG14 Undergraduate Mathematics and Statistics (BSc)
- Year 3 of USTA-Y602 Undergraduate Mathematics, Operational Research, Statistics and Economics

- Year 4 of USTA-Y603 Undergraduate Mathematics, Operational Research, Statistics, Economics (with Intercalated Year)

This module is Option list C for:

- Year 2 of USTA-G300 Undergraduate Master of Mathematics, Operational Research, Statistics and Economics
- Year 3 of USTA-G1G3 Undergraduate Mathematics and Statistics (BSc MMathStat)
- Year 4 of USTA-G1G4 Undergraduate Mathematics and Statistics (BSc MMathStat) (with Intercalated Year)
- Year 2 of USTA-Y602 Undergraduate Mathematics, Operational Research, Statistics and Economics
