

PX3A6-15 Galaxies and Cosmology

26/27

Department

Physics

Level

Undergraduate Level 3

Module leader

Heather Cegla

Credit value

15

Module duration

10 weeks

Assessment

100% exam

Study location

University of Warwick main campus, Coventry

Description

Introductory description

A galaxy is a system of stars, dust, stellar remnants and other bodies bound by gravity. Galaxies usually form groups, bound by their gravitational interaction, and these groups themselves tend to be part of even larger superclusters. We will see that we can put together quite simple explanations of what we observe in these complex systems.

Questions about the origin of the Universe, where it is going and how it may get there are the domain of cosmology. One of the questions addressed in the module is whether the Universe will continue to expand or ultimately contract. Relevant experimental data include those on the Cosmic Microwave Background radiation and the distribution of galaxies.

[Module web page](#)

Module aims

To illustrate how important physical principles, from different areas of physics, can be developed to yield a description of complex physical systems like galaxies. To present the credentials of the Universe as we know it (via experiment) and introduce the simplest models that can describe it. The module should stress the role of experimental data and emphasize cosmology as a physical science, which makes testable predictions that describe the observed Universe.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

Galaxy classification; the Hubble Tuning Fork; elliptical and spiral galaxies; surface brightness profiles. The Milky Way, its structure and properties; the role of stellar populations and the interstellar medium.

Galaxy populations; luminosity functions, star formation vs AGN, radio galaxies and seyferts. Galaxy kinematics; Tully-Fisher relation; rotation curves; dark matter; virial mass.

The role and origin of dust and gas in galaxies; dust extinction laws; types of dusty galaxies. Introduction to galaxies at large scale: the Local Group and nearby clusters.

The history and foundations of modern cosmology: Olber's Paradox, Hubble's Law and the Cosmological Principle. Describing the evolution of the Universe: basics of space time and relativity, curvature, Friedmann equation, fluid and acceleration equations.

Model universes: describing the evolution when dominated by single component and multiple-components - the standard cosmological (benchmark) model.

Key properties of our Universe: tests of the standard cosmological model, evidence for dark matter; models for dark matter, origin of structure.

The early Universe: the Big Bang, connection to elementary particle physics and grand-unified field theories (GUTS), inflation, Big Bang nucleosynthesis, formation of the cosmic background radiation.

Learning outcomes

By the end of the module, students should be able to:

- Describe the structure of our own Galaxy and how it fits into the 'zoo' of galaxies distributed through the Universe;
- Explain the physical principles behind the observations used to study galaxies
- Discuss the outstanding problems in the study of galaxies including the nature of galaxy cores and the roles of dark matter and dust
- Recognise the importance of observations in constraining possible cosmological theories
- Explain the evolution of model universes, and how this evolution depends on their energy density components
- Discuss areas of cosmology where more work is needed to reconcile theory and observations

Indicative reading list

[Reading lists can be found in Talis](#)

[Specific reading list for the module](#)

Subject specific skills

Knowledge of mathematics and physics. Skills in modelling, reasoning, thinking.

Transferable skills

Analytical, communication, problem-solving, self-study

Study

Study time

Type	Required
Lectures	30 sessions of 1 hour (20%)
Private study	120 hours (80%)
Total	150 hours

Private study description

Working through lecture notes, solving problems, wider reading, discussing with others taking the module, revising for exam, practising on past exam papers

Costs

No further costs have been identified for this module.

Assessment

You must pass all assessment components to pass the module.

Assessment group B

Assessment component	Weighting	Study time	Eligible for self-certification
Centrally-timetabled examination (On-campus)	100%		No

Weighting **Study time**

Eligible for self-certification

Answer 3 questions

- Answerbook Pink (12 page)
- Students may use a calculator

Reassessment component is the same

Feedback on assessment

Personal tutor, group feedback

Courses

This module is Core for:

- Year 3 of UPXA-F3F5 Undergraduate Physics with Astrophysics (BSc)
- UPXA-F3FA Undergraduate Physics with Astrophysics (MPhys)
 - Year 3 of F3F5 Physics with Astrophysics
 - Year 3 of F3FA Physics with Astrophysics

This module is Option list A for:

- Year 3 of UPXA-F300 Undergraduate Physics (BSc)
- UPXA-F303 Undergraduate Physics (MPhys)
 - Year 3 of F300 Physics
 - Year 3 of F303 Physics (MPhys)
- Year 4 of UPXA-F301 Undergraduate Physics (with Intercalated Year)

This module is Option list B for:

- UMAA-G105 Undergraduate Master of Mathematics (with Intercalated Year)
 - Year 4 of G105 Mathematics (MMath) with Intercalated Year
 - Year 5 of G105 Mathematics (MMath) with Intercalated Year
- Year 3 of UMAA-G100 Undergraduate Mathematics (BSc)
- UMAA-G103 Undergraduate Mathematics (MMath)
 - Year 3 of G100 Mathematics
 - Year 3 of G103 Mathematics (MMath)

- Year 4 of G103 Mathematics (MMath)
- Year 4 of UMAA-G107 Undergraduate Mathematics (MMath) with Study Abroad
- Year 4 of UMAA-G106 Undergraduate Mathematics (MMath) with Study in Europe
- Year 3 of UPXA-GF13 Undergraduate Mathematics and Physics (BSc)
- UPXA-FG31 Undergraduate Mathematics and Physics (MMathPhys)
 - Year 3 of GF13 Mathematics and Physics
 - Year 3 of FG31 Mathematics and Physics (MMathPhys)
- Year 4 of UPXA-GF14 Undergraduate Mathematics and Physics (with Intercalated Year)
- Year 4 of UMAA-G101 Undergraduate Mathematics with Intercalated Year
