

WM3B2-24 Data Science, Algorithms and Complexity in the Cyber Context

26/27

Department

WMG

Level

Undergraduate Level 3

Module leader

Christo Panchev

Credit value

24

Module duration

30 weeks

Assessment

Multiple

Study location

University of Warwick main campus, Coventry

Description

Introductory description

This module develops the central concepts and skills required to design, implement and analyse algorithms for solving problems. Algorithms are essential in all advanced areas of technical cyber security and related subjects, including artificial intelligence, databases, data science, distributed computing, graphics, networking, operating systems, programming languages and security. An important part of using them well is the ability to select algorithms appropriate to particular purposes and to apply them, recognising the possibility that no suitable algorithm may exist. This facility relies on understanding the range of algorithms that address an important set of well-defined problems, recognising their strengths and weaknesses, and their suitability in particular contexts in combination with complementary data structures. Efficiency is a pervasive theme and a clear understanding of algorithmic complexity is essential if efficient algorithms are to be designed and used.

Module aims

The module aim to develop student's knowledge of the development and application of the most common machine learning models, and in particular a critical understanding of the applicability of each machine learning algorithms in the solution of a particular problem (class of problems). It will

cover the best practice and main steps of developing AI-based solution, including data collection/engineering and pre-processing, model design, training and evaluation, and deployment.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

The content of this module will be taught from a cyber security perspective.

Basic analysis

Algorithmic strategies

Fundamental data structures and algorithms

Basic automata, computability and complexity

Topics in data science and machine learning

Learning outcomes

By the end of the module, students should be able to:

- Assess the appropriateness and complexity of common algorithms, algorithmic strategies and data structures for application in the cyber context. (AHEP: 2.1.1, 2.1.2, 2.1.5, 2.1.6, 2.1.7, 2.1.10, 2.1.11, 2.1.12, 2.2.2, 2.3.2, C1, C2, C3, C12)
- Critically evaluate the complexity and efficiency of an algorithm. (AHEP: 2.1.1, 2.1.2, 2.1.5, 2.1.6, 2.1.7, 2.1.10, 2.1.11, 2.1.12, 2.2.2, C1, C2, C3, C12)
- Collect, engineer and pre-process real-world data suitable for building machine learning models (AHEP: 2.1.1, 2.1.2, 2.1.6, 2.1.7, 2.1.10, 2.1.12, 2.3.2, C1, C12)
- Develop, secure and optimise the performance a machine learning model (AHEP: 2.1.1, 2.1.2, 2.1.5, 2.1.6, 2.1.7, 2.1.10, 2.1.11, 2.1.12, 2.2.2, 2.3.2, C1, C2, C3, C12)

Indicative reading list

[Reading lists can be found in Talis](#)

[Specific reading list for the module](#)

Subject specific skills

1 - Critically evaluate the appropriateness of common algorithms, algorithmic strategies and data structures for application in the cyber context.

2 - Critically evaluate the complexity and efficiency of an algorithm.

Transferable skills

Problem solving

Study

Study time

Type	Required
Supervised practical classes	36 sessions of 1 hour (25%)
Online learning (independent)	10 sessions of 1 hour (7%)
Private study	98 hours (68%)
Total	144 hours

Private study description

Independent activity between workshops, following up on activities initiated in previous workshops or preparing for upcoming workshops.

Costs

No further costs have been identified for this module.

Assessment

You do not need to pass all assessment components to pass the module.

Assessment group C4

	Weighting	Study time	Eligible for self-certification
Machine learning project	50%	48 hours	Yes (extension)
Students will be provided with a data set and tasked with developing a machine learning model solving a particular problem. They will be expected to justify their choice of the specific machine learning model, as well as analyse and evaluate the proposed solution.			
Centrally-timetabled examination (Online)	50%	48 hours	No
Exam on algorithms and complexity			
~Platforms - AEP			

- Online examination: No Answerbook required

Assessment group R2

	Weighting	Study time	Eligible for self-certification
Machine learning project	50%	48 hours	No
Centrally-timetabled examination (Online)	50%	48 hours	No

- Online examination: No Answerbook required

Feedback on assessment

Verbal feedback during tutorial sessions

Summative feedback on assignments and exam
