Module duration

28 weeks

Assessment

100% coursework

Study location

University of Warwick main campus, Coventry

Description

Introductory description

The landscape defining healthcare service delivery is undergoing rapid changes. While this has created unprecedented opportunities for providing high quality person-centred care, it also brings with it unique challenges on best ways to manage the changes that are redefining the service environment. Hence, leaders and managers must not only deal with changes that are redefining care delivery, equally important, they must anticipate trends that will lead to change; provide leadership in a work environment often characterized by unforeseen events that trigger change; find ways to address reactions and resistance to change while at the same time identify and harness the opportunities that arise from the change.

At times, they might even have to initiate change, develop a plan and communicate this to staff and other stakeholders, and oversee the implementation process so as to facilitate the intended impact.

Module aims

This module aims to develop an understanding of how complex and highly distributed healthcare organisations respond to emerging challenges and uncertainties through the examination of relevant evidence and critical analysis. It encourages learners to develop self-awareness as

leaders of change by engaging with leadership theories, experiential learning, and reflective practice to understand how change impacts organisations. The module also explores practical frameworks, tools, and techniques for leading change within healthcare environments, while considering the sustainable impact of governance, ethics, and values.

Outline syllabus

This is an indicative module outline only to give an indication of the sort of topics that may be covered. Actual sessions held may differ.

1. Leadership in the healthcare context of change, complexity and ambiguity
2. Applying frameworks, models and tools for change in a healthcare environment
3. Resolving conflict – values, discourse and dialogue
4. Embedding and sustaining change in healthcare contexts

Learning outcomes

By the end of the module, students should be able to:

- Articulate a comprehensive understanding of the different requirements for initiating change and describe how these could be implemented in selected scenarios involving complex health care organizations providing patient services
- Demonstrate critical understanding of the impact of change on the design, economics, governance and ethical considerations surrounding the management of healthcare service delivery systems
- Analyze critical evidence on tools, methods and concepts to be effective leaders of change in healthcare environments
- Demonstrate critical understanding of existing theories and concepts involving change, and be able to apply these to new problems and scenarios in health service delivery
- Critically evaluate suitability of factors necessary to initiate and manage change in health service and describe how these can be implemented in selected scenarios

Indicative reading list

[Reading lists can be found in Talis](#)

[Specific reading list for the module](#)

Research element

This module incorporates elements of exploratory research, essence and importance of qualitative and procedural information, themes that arise from complex information and their interpretation surrounding quality improvement in the healthcare sector.

Interdisciplinary

Healthcare operational management is an emerging discipline that combines health science methodologies with engineering, statistics, quantitative elements of management with data science for quality and productivity improvement in the healthcare sector. In the context of this module, elements of leading change sit at the borders of these disciplines.

Subject specific skills

- Structuring healthcare system
- Organizational interdependencies
- Continuous improvement
- Ethics and values
- Strategies

Transferable skills

- Teamwork and collaboration
 - Modelling complex decisions
 - Stakeholders
 - Negotiation
 - Translating information into operational strategies
 - Complexity and ambiguity
-

Study

Study time

Type	Required
Lectures	20 sessions of 1 hour (13%)
Seminars	(0%)
Practical classes	(0%)
Online learning (scheduled sessions)	10 sessions of 1 hour (7%)
Online learning (independent)	30 sessions of 1 hour (20%)
Private study	30 hours (20%)
Assessment	60 hours (40%)
Total	150 hours

Private study description

Students will be provided with a reading list which they will use to support their learning on the subject matter involving the module. Once students have read the articles from the reading list, they will be able to use the derived knowledge and information to conduct their own research and increase their understanding of topics taught through the module.

Costs

No further costs have been identified for this module.

Assessment

You must pass all assessment components to pass the module.

Assessment group A4

	Weighting	Study time	Eligible for self-certification
Assessment component			
Written Assignment-1	60%	36 hours	Yes (extension)
Develop a case for change in the health sector with underpinning evidence.			

Reassessment component

Written Assignment-1	No
Develop a case for change in the health sector with underpinning evidence.	

Assessment component

Written Assignment-2	40%	24 hours	Yes (extension)
Critically evaluate theory guiding change process in the health sector.			

Reassessment component

Written Assignment-2	No
Critically evaluate theory guiding change process in the health sector.	

Feedback on assessment

Written feedback on each assignment.
